ALPHA OMEGA

AI-Enabled ROTC Accessions in the Army Accessions Information Environment (AIE)

Mapping the ROTC officer-accessions lifecycle to the AIE Functional RTM — ideas, use cases & business flows on AIE's COTS Salesforce + MuleSoft + DocuSign + Azure foundation.

Briefing Deck · Solution Concept · June 2026

Bracketed IDs (e.g., 3.4.4.18) cite AIE RTM requirements. Human-in-the-loop by design: AI never decides eligibility, selection, suitability, or clearance.

AIE at a glance

"A multi-network, multi-device, secure COTS solution in commercial cloud that automates accessions & recruiting." (OV-1)

~30,000	~14,000	~5,100	~1,000
Cadets recruited & developed	Scholarships managed	Recruiters / staff	ROTC locations

ROTC accessions span three sub-paths, all built on the shared AIE foundation:

Scholarship Program

National 4-yr, Green-to-Gold, on-campus & campus-based awards

On-Campus

MS I–IV enrollment, screening, contracting & Cadet management

Summer Training Camps

Basic & Advanced Camp (CST) and CPDT, with camp medical screening

AIE capability framework — where ROTC lives

The ROTC lifecycle touches all eight RTM capabilities

1 Foundation

Single record, forms generate/sign, integration, IL4 security

2 CRM

Leads, scholarship apps & boards, pre-screen, digital interview

3 Processing

Eligibility, DoDMERB/security interfaces, contracting, RPA, Cadet mgmt

4 On-Boarding

ROTC accession orders, branch/component, commissioning

5 Intelligence

Mission COAs, scholarship-funding modeling, PMS forecasts

6 Marketing

Propensity & campaign targeting to feed the pipeline

7 Training & Leader Dev

LMS (MS I–IV), Basic/Advanced Camp, camp medical

8 Sustain & Support

DD-918 agreements, retention reviews, Cadre hierarchy

The ROTC lifecycle in AIE

Ten connected stages — each traced to RTM requirement IDs

S1 Lead & Prospect — [2.1]

S2 Scholarship App & CBEF — [2.1.4]

S3 Pre-Screen & Eligibility — [2.3.1.6]

S4 PMS Interview — [2.3]

S5 DoDMERB Medical — [3.3.1.7]

S6 Selection Boards — [2.1.4.7]

S7 Offer & Contract — [3.4.4]

S8 SF-86 Completion — [3.4.4.18]

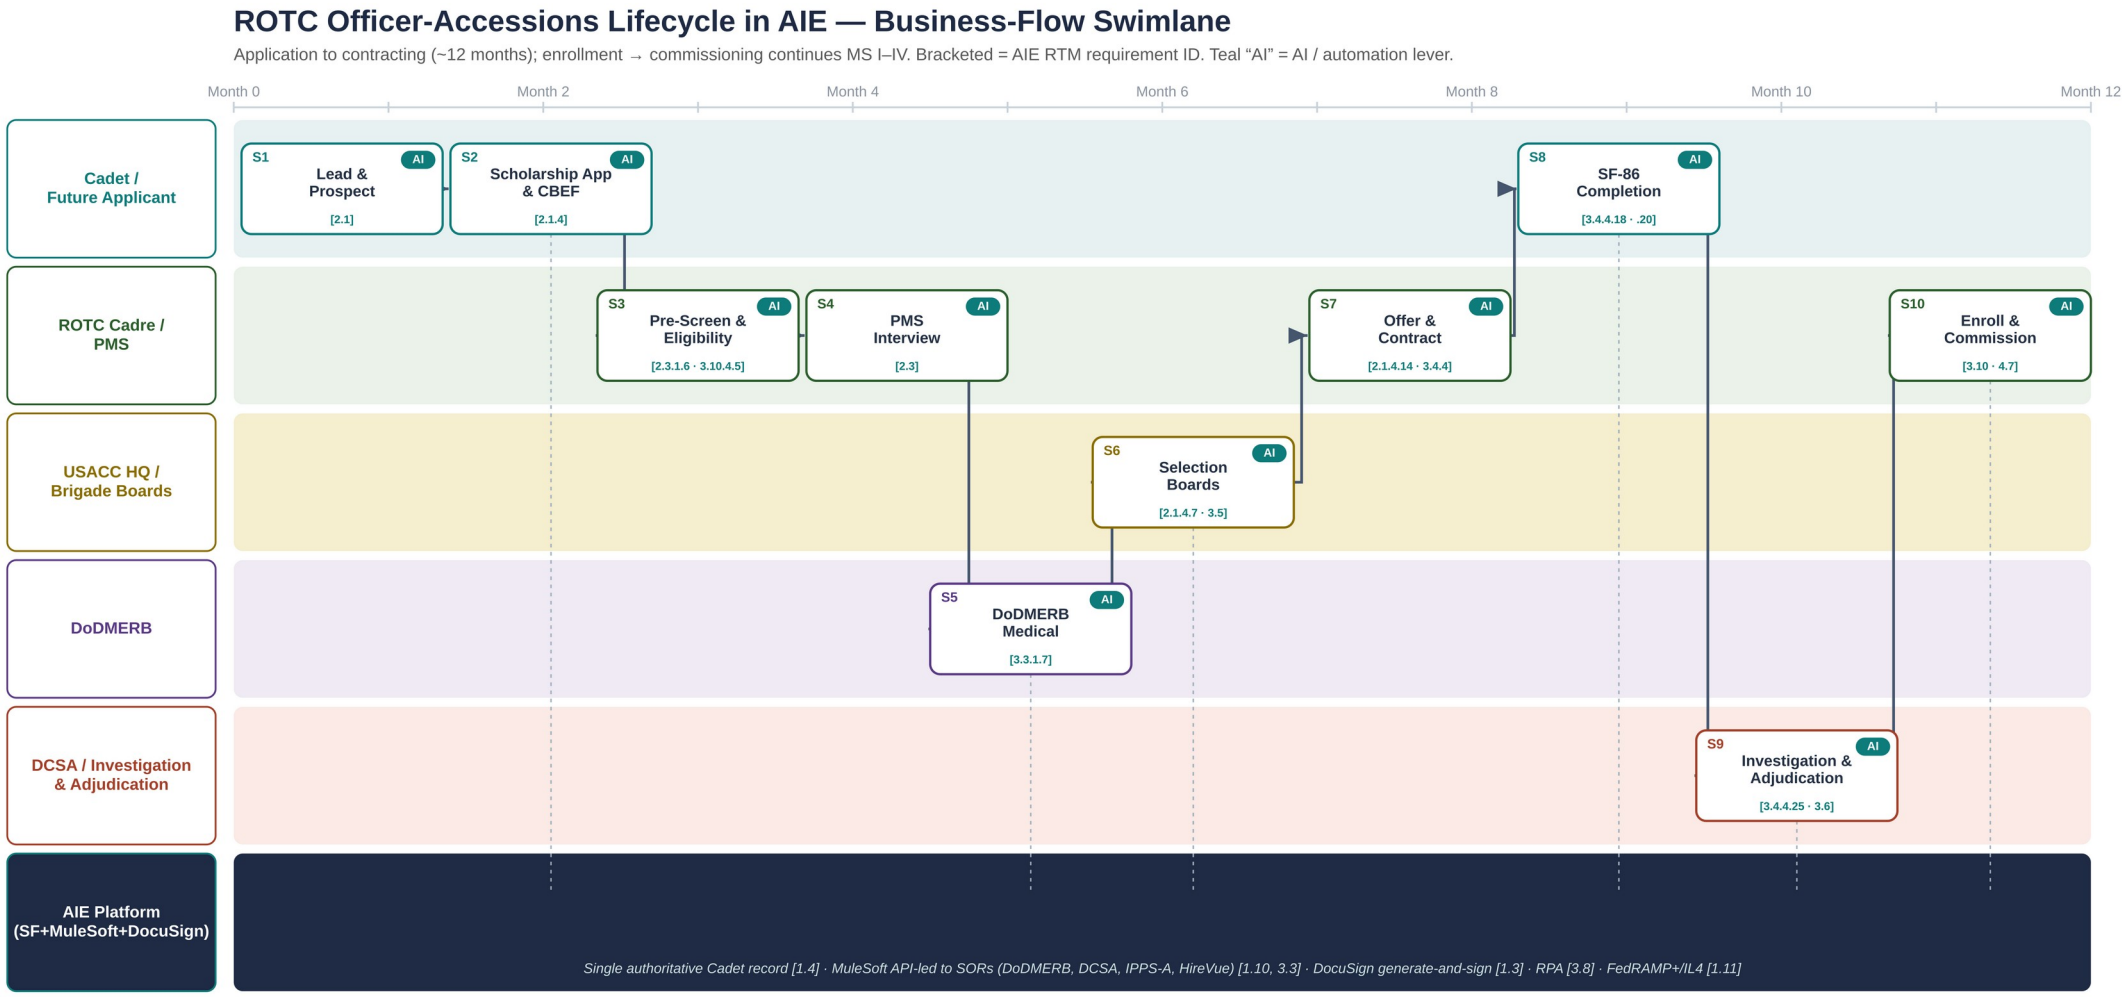

S9 Invest. & Adjudication — [3.4.4.25]

S10 Enroll & Commission — [3.10 · 4.7]

Stages 1–9 are the ~1-year application-to-contracting cycle; enrollment, training & commissioning continue across MS I–IV.

Business-flow swimlane

Who does what, when — traced to AIE requirements

Designing for two people first

The Cadet completing forms & the SF-86 — and the adjudicator reviewing them

The Cadet

Today

- Overlapping forms: scholarship app, CBEF, contracting, then SF-86
- Reconstructs years of history from memory for the SF-86
- SECRET clearance due within 60 days of contracting [3.4.4.18]
- Little feedback until pre-screen or reviewer rejects

With AI

- Conversational guided intake on community portal [2.5]
- Consented pre-fill reuses core data across forms [1.4]
- Real-time validation = AIE continuous screening [3.4.4.20]
- Document capture (IDP) to single record [1.2, 1.4]

The Cadre / Adjudicator

Today

- Manually reads packets & SF-86s across many SORs
- Time lost on incomplete submissions & interrogatories
- Heavy manual board assembly & scoring [2.1.4.7]
- Hard to prioritize highest-risk / nearest-deadline

With AI

- Copilot summarizes, flags gaps, links evidence→guideline [3.8.1.1]
- Completeness gating; RPA clears SOR steps [3.8]
- Queue ranked by deadline & risk; next-best-action
- Unified Cadet record, full audit trail [2.6]

Guardrail: AI surfaces & organizes; eligibility, selection, suitability & clearance decisions remain human under SEAD 4.

Deep dive: SF-86 & security clearance

A concrete RTM workflow — and a high-value AI target

3.4.4.18 Initiate & complete SF-86 within 60 days of contracting for SECRET

3.4.4.20 Continuous screening & data validation for accurate SF-86

3.4.4.23 Auto-identify Cadets needing Top Secret by branch

3.4.4.25 Interface with DCSA to send/receive SF-86 results & docs

3.4.4.21 Support appeal process for denied clearances

3.4.4.22 Detect existing clearance/investigation from SOR

AI levers mapped to these requirements

- Consented SF-86 pre-fill + real-time validation — fewer errors, faster start
- Adjudicator copilot — summarize, flag gaps, link evidence to guideline, draft interrogatories
- Predictive case prioritization against the 60-day window; automated nudges
- RPA moves SF-86 packages & DCSA responses across SOR interfaces — determinations stay human

AI opportunity matrix

Pain → method → AIE capability/requirement → value

Stage	Pain today	AI method	AIE capability / req	Value
Application & CBEF	Abandonment, partial data	Conversational AI, pre-fill, validation	CRM 2.1.4; Foundation 1.4	Speed + exp.
Pre-screen / eligibility	Manual checks, rework	Rules + anomaly; suitability assist	2.3.1.6, 3.8.1.1	Quality + risk
Interview	Coordination, scoring drift	Summarization, rubric checks	CRM 2.3	Quality
Medical (DoDMERB)	Silent delays, waivers	Status sync, doc AI, prediction	3.3.1.7, 3.2.1.15	Speed
Selection boards	Packet assembly, ranking	Auto-assembly, completeness, analytics	2.1.4.7, 3.5	Speed + quality
Offer & contract	Manual letters, forms	Generated correspondence, e-sign	2.1.4.14, 1.3	Speed
SF-86 & clearance	Errors, 60-day window	Pre-fill, validation, copilot, triage	3.4.4.18–.25	All four
Enroll & manage	Manual tracking, ETPs	Auto-screening, near-real-time status	3.10	Quality + risk
Cross-cutting workload	High manual volume	RPA across SOR steps	3.8	All four

Priority use cases

Each traced to AIE requirements

UC-01

Conversational app & CBEF intake

RTM: 2.1.4 · 2.5

UC-02

Document AI & eligibility screening

RTM: 2.3.1.6 · 3.8.1.1

UC-04

Board packet assembly & scoring

RTM: 2.1.4.7 · 3.5

UC-05

SF-86 pre-fill, validation & copilot

RTM: 3.4.4.18 · .20

UC-06

Adjudicator / reviewer copilot

RTM: 3.8.1.1 · 3.6

UC-07

RPA across SOR steps

RTM: 3.8 · 3.3

Target-state architecture on the AIE stack

COTS-first, API-led, governed AI, IL4

Experience	Community portal & cadre workspaces on Salesforce [2.5, 1.6] · conversational assistants · DocuSign signing
Engagement / Case	Salesforce across CRM [2], Processing [3], On-Boarding [4] · configurable workflows [3.2] · single record [1.4]
AI + Automation	Azure OpenAI & Azure AI + Einstein (governed, in-boundary) · pre-screen [2.3.1.6] · suitability [3.8.1.1] · RPA [3.8]
Integration (backbone)	MuleSoft API-led per OV-3 [1.10, 3.3] → DoDMERB [3.3.1.7] · Security SOR [3.3.1.9/.10] · DCSA [3.4.4.25] · IPPS-A · HireVue · LMS
Document & e-sign	DocuSign generate-and-sign forms, offers, contracting, consent [1.3]
Platform & security	COTS in commercial cloud (OV-1) · FedRAMP+/IL4 [1.11.1.59] · PII/PHI [1.11.1.75] · multi-tenant upgrades [1.11] · DevSecOps

Responsible AI, security & governance

1

Human-in-the-loop by design

AI summarizes, validates & recommends. Eligibility, selection, suitability & clearance remain human under SEAD 4. Automated screening/suitability [3.8.1.1, 3.10.4.5] advise, not decide.

2

Hybrid deterministic + generative AI

Rules engines for policy-bound checks (predictable, auditable); generative AI for language tasks within guardrails.

3

Security & data protection

FedRAMP+/IL4 [1.11.1.59] · PII/PHI per DoDD 5400.11 & DoDI 8580.02 [1.11.1.75] · DCSA-aligned SF-86 handling · AI inside the accredited boundary.

4

Transparency & traceability

Model evaluation, explainable scoring, and a logged record of each recommendation — inspection-ready and RTM-traceable.

Delivery: SAFe + DevSecOps on Azure DevOps

1 SAFe Agile Release Train

Aligned to AIE capabilities; PI planning & continuous demos to USACC, DoDMERB & DCSA stakeholders

2 Azure DevOps hub

Backlog, boards, repos & pipelines as one system — traceable to RTM requirement IDs

3 DevSecOps pipelines

CI/CD for Salesforce (SFDX) & MuleSoft with automated test, security scanning, policy-as-code, rollback

4 Continuous upgrades & ATO

Leverage AIE multi-tenant continuous-upgrade model [1.11]; automate control evidence to sustain authorization

Phased roadmap

Crawl, walk, run — value at every step

Phase 1 — Crawl

Foundation

- Single Cadet record & workflows [1.4, 3.2]
- DocuSign forms [1.3]
- MuleSoft APIs to DoDMERB & security SORs
- Quick wins: guided intake, document AI

Phase 2 — Walk

Intelligence

- SF-86 pre-fill & validation [3.4.4.20]
- Adjudicator copilot [3.8.1.1]
- Board packet assembly [2.1.4.7]
- RPA across SORs [3.8]

Phase 3 — Run

Optimization

- Mission & funding analytics [5.1.4]
- Predictive prioritization
- Continuous data-quality & ATO
- Extend to enlisted accessions

Expected outcomes

↓ Cycle time

application → contracting

↑ Data quality

first-pass completeness; SF-86

↑ On-time SF-86

60-day window [3.4.4.18]

↓ Burden

Cadre/adjudicator hours (RPA)

A faster, cleaner, lower-risk ROTC accessions lifecycle for the Cadet and the adjudicator — traceable to the AIE RTM at every step, with every decision in human hands.

Next step: a discovery session and a proof-of-concept to baseline current state and prioritize the first AIE increment.
